

Garage Door Operation: Information Sheet

How does the door open?

- The grey button on the garage FOB opens the garage door. If concrete or other obstacles are obstructing the path between the FOB and the door, it may not open. Hold the button down until the door begins to open.
- Wait until the door is completely open before entering/exiting.

What if someone else is entering or exiting at the same time that I am entering or exiting?

- In most cases, the car that is already on the ramp gets priority
- Common sense should be used and drivers should determine who can back away most safely and then do so to let the other driver through
- The decision should be made based on safety, not on which driver is in the biggest hurry

If someone is entering or exiting in front of me, should I come in behind them without pressing the FOB button?

- NEVER!
- If someone is entering or exiting in front of you, follow this process:
 1. Wait until the person in front of you completely exits or enters (do not follow them)
 2. Wait again until the garage door closes completely.
 3. Press the grey FOB button to open the door and wait until the door is completely open.
 4. Then enter or exit safely.
- FAILURE TO FOLLOW THESE STEPS COULD RESULT IN DAMAGE TO YOUR VEHICLE AND/OR DAMAGE TO THE GARAGE DOOR.
